1937 LIST of ANNUALS and PERENNIALS

DEPARTMENT OF AGRICULTURE,

WASHINGTON, D. C.

OF PLANT INDUSTRY
Stable Crops and Diseases

• • • 8-3591

May I offer you my sincere appreciation for your patronage in the past year. As in previous years I am making this catalogue as interesting and alluring as possible, yet I am not trying to sell you things which you have no desire for at all. There are some new things however that I know you will want as several of them have been much talked about and much praised in the year. Where you see the word NEW you will find your specialties. Be sure to study the list carefully and then send in your order that you will not be dissatisfied.

Both the Annual and Perennial plants are of excellent quality. The Annuals this year I know to be rugged and well grown. They now have an excellent green color which proves that they are in better condition than ever before. The Perennials are also stocky and healthy and no matter how few or many you may buy, the same high grade quality goes with each and every plant.

If you have garden problems that you would like to discuss with me in any phase I will be most happy to talk it over with you. Perhaps I can suggest some worthwhile changes that would be beneficial to you. In other words I have a complete landscape service department that is available to you at any time.

This year I am happy to introduce to you "THE GARDENCRAFT SHOP" which will contain many things of interest to you. There will be pottery and glass, some of both imported. Then of course there will be tools and other garden accessories. I will also have cut flowers for many occasions, and if you want something very special I have many ideas. You will receive an Opening Announcement before the shop is open to the public. I think this will be a feature which will be most helpful and one that you will enjoy.

Drive in at the sign "Elizabeth Rodman, Landscape planning and Planting, Annual and Perennial Plants". Post Road U.S. Route #1 one mile North of Wickford, Rhode Island. Or phone Wickford 274-"

VISITORS ARE ALWAYS WELCOME.

Sweet Peas.

Because of the popularity of Sweet Peas last year, I am offering them again. The list of varieties this year are a better selection than last. The stems are longer, the colors are brighter and they will bloom longer. You will have more enjoyment because of these facts. Whether you purchased or not last year you will surely want some this year. The list follows;

Avalanche white	Matchless-deep cream
Hawlmart lavender	Model-White
Here-cerise	Pinnacle-Rose Pink.
Fluffy ruffles-pink	Powerscourt-Lilac lavender
Royal purple-deep purple	Pinkie-light rose pink.

The plants are in three inch pots with three in a pot. This way they are easily transplanted. Almost any good garden soil will do. It is wise however to make some preparation, for satisfactory results. Dig a trench two feet wide and twelve to eighteen inches deep. In replacing the soil, incorporate plenty of humus, especially well rotted manure and add a little lime. Mix as you refill the trench. Pack soil down well to prevent air pockets. When you set the plants be sure they are good and firm for the same reason. Be careful not to break the roots. Plant contents of each pot 12-15 " apart. Then be sure that they get plenty of water as that is very important. Spray with nicotine solution if aphids appear. Place a support before plants are set so they can start right in climbing. The plants will be ready the latter part of April or first of May. Remember the earlier the start, the better the plants grow and produce.

The plants are priced at 15¢ per pot. In doz lots \$1.50

1. The first step in the process of the scientific method is to make an observation or ask a question. For example, you might notice that plants in a sunny location grow faster than plants in a shady location. This observation leads to a question: "Does the amount of sunlight affect the growth rate of plants?"

2. Next, you formulate a hypothesis, which is a tentative answer to your question. In this case, your hypothesis might be: "If a plant receives more sunlight, then it will grow faster." A hypothesis is a statement that can be tested through experimentation.

3. The third step is to design and conduct an experiment. You would need to set up two groups of plants: one group in a sunny location and one group in a shady location. You would then measure the growth rate of the plants in each group over a period of time. It is important to control variables, meaning you should keep all other factors (like water and soil) the same for both groups.

4. After conducting the experiment, you collect data and analyze it. You might measure the height of the plants or the number of leaves they have. If the plants in the sunny location grew taller or had more leaves than the plants in the shady location, your data would support your hypothesis.

5. Finally, you draw a conclusion based on your results. If the data supports your hypothesis, you can say that your hypothesis was correct. If the data does not support your hypothesis, you might need to revise your hypothesis and conduct another experiment. The scientific method is a cycle of testing and learning.

ANNUALS FOR 1937.

- AGERATUM- These plants are nice for borders and beds. The first two that are listed are best used in rock gardens or along borders. All these plants bloom all summer and where you have them planted there will always be a very bright spot of color. DOZ.
- A. Red riding hood. NEW. Rose pink with a deeper pink center. You will want to try this one as it is very lovely. .40
- A. Blue Cap. I have tried several kinds of low blue ageratum and I have found that this variety is the best one. It is more bushy and the color does not fade. It can be used for cutting and innumerable other places .40
- A. Tall Blue. This is especially nice for cutting. In the perennial border it is a grand thing to use to cover bare spaces where bulbs have once been the glory of the garden. It has a clear blue flower. Summer bloomer. 2 ft. .40
- ALYSSUM- Carpet of Snow. Pure white with large heads of flowers. Nice for the rock garden or border. Summer. 6 inches. Cutting .35
- A. Lilac Queen. The same type as the preceding one. The color is a light lavender but if used with the white variety, it is very effective. These two varieties are nice used in old fashioned bouquets. .35
- ARCTOTIS GRANDIS- A plant coming from South Africa. It has all the delicate colorings of its native habitat. The flowers are silvery white with the under petals a clear blue. Nice for cutting. Borders 2 ft. .40
- ASTERS.- This year I have Asters that are rot-resistant. These are the best to plant as they are free from the fungus that causes root rot. They make better plants and the flowers are better shaped.
- A. Early Phlox Pink. Light rose pink. Cutting. Bedding or borders 2 ft. They bloom all summer and last well into the fall. .40
- A. Azure Blue. Another tall sort that is used for cutting and borders. Clear blue flowers. Long stems. 18 inches. .40
- A. Royal White. The best of the white asters. Cutting. Good stems. 18" .40
- A. Aurora Golden Sheaf. NEW. Cushioned center type. The center petals are quilled as well as the outer petals. Light yellow, something new in aster colors. Excellent cutting qualities. 18" Display. .40
- A. Southcote Beauty. Dark Blue. Cutting. A lovely single aster. 2 ft. .40
- A. Giant White Ray. IMPORTED*NEW. Large flowers with long petals radiating from the center. It has a soft appearance. 2 ft. cutting. .40
- A. Pompon. Make nice low groups for bright spots of color. Best planted with 5 or 6 in group. Separate colors. Cutting. Borders. 8-10 in. Colors; Rose. Light Blue. Crimson-white center .35
- BRACHYCOME- Swan River Daisy. It makes you feel lazy to look at it. It is a very graceful plant and the flowers are light and airy. 6-8" Nice for miniature bouquets. Delightful used in your flower garden. .35
- CACALIA COCCINEA* Tassel flower. Also known as the Fairy paint brush. It blooms all summer and the colors, though mixed are exquisite. 18" Nice for cutting. The flowers resemble minute tassels. .40
- CALENDULAS. Scotch Marigold- These are always nice as they are easy to grow, easy to arrange, and always make a bright spot of color .
- C. Gold. Long stemmed. Summer 2 ft. A deep yellow. Cutting. Summer. .40
- C. Supreme. Light orange flowers with a brown center. 2 ft. Cutting .40
- CARNATION.- Enfant de Nice. You must try some of these. Mixed colors. Nice for cutting and simply grand for the garden. 18" .40
- CENTAUREA CYANUS.- Bachelor's Button. These are all double this year. They are nice for cutting. Also nice for in the border. Summer. 2 ft.
- C. Blue Boy. Nice dark blue that does not fade too much. Very popular. .40
- C. Carmine. A good dark red. Very pleasing in any combination. .40
- C. White. A good clear white for your arrangements. .40
- C. Combination of the above with still other lovely shades. Mixed .35

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that proper record-keeping is essential for transparency and accountability, particularly in financial matters. The text suggests that organizations should implement robust systems to track every detail, from small expenses to major investments.

2. The second section focuses on the role of technology in modern record-keeping. It highlights how digital tools can streamline the process, reducing the risk of human error and making data more accessible. The author argues that while technology offers significant advantages, it must be used responsibly, with appropriate security measures in place to protect sensitive information.

3. The third part of the document addresses the challenges of data management. It notes that as the volume of data grows, it becomes increasingly difficult to maintain its integrity and relevance. The text suggests that organizations should regularly review their data storage practices and ensure that only necessary information is retained for the required period.

4. The fourth section discusses the importance of training and education for staff involved in record-keeping. It stresses that even the most advanced technology is only as good as the people using it. Regular training sessions and clear guidelines are necessary to ensure that all team members understand their responsibilities and the correct procedures to follow.

5. The fifth part of the document explores the legal and regulatory aspects of record-keeping. It mentions that various industries are subject to specific laws and regulations regarding data retention and access. Organizations must stay up-to-date with these requirements to avoid potential legal consequences.

6. The sixth section provides a summary of the key points discussed throughout the document. It reiterates the importance of accuracy, the use of technology, effective data management, staff training, and compliance with legal standards. The author concludes by encouraging organizations to adopt a proactive approach to record-keeping to ensure long-term success and transparency.

ANNUAL LIST CONT

DOZ.

- CHRYSANTHEMUM-These have the same type flowers as our hardt"muns" but they are not as large.Splendid for cutting.Bloom all summer.18-24"
